

ALBOND PE/FR/A2 COMPOSITE PANELS STORAGE GUIDE

1. Vertical stacking of Albond panels is not recommended. Panels can be stacked horizontally or with an equipment such as a special pyramid, with faces facing each other, not more than 100 sheets at a 10-degree angle.
2. Pallets which are unpacked should not be moved.
3. No objects, tools, objects should be placed on the pallets and panels.
4. It should not be pressed on the pallets.
5. The panel must be carefully held in vertical position by two people while being picked up on the pallet without being bent and twisted.
6. Before lifting the pallet, it is necessary to open the forklift blades at the maximum level.
7. The pallets must be stacked on each other with no more than 6 pallets. Heaviest pallet should be at the bottom.
8. At the pallets which are stacked on each other, the support bars of the pallets should be aligned at the same axis.
9. Storage should be done in cool and dry environment (preferably indoor environment). Excessive temperature changes in the storage location can cause form changes that can lead to permanent damage to the stockpiled panels.
